

# Fax Security Checklist

In an era where security and compliance regulations are becoming increasingly more stringent, there is no more important consideration when choosing a fax solution than security.

Answer these **Seven Key Questions** to determine if your fax environment is secure:

- Can you access and control your faxes around the clock?
- Are you able to restrict unauthorized people from sending, receiving, viewing, and copying faxes?
- Can you reproduce sent and received fax pages?
- Can you easily report all fax transactions?
- Are your inbound faxes received directly by the intended recipient without sitting on a shared fax device?
- Do all sent faxes automatically include your fax cover page with contact information and confidentiality statement?
- Can you send or receive faxes when your fax telephone service or fax devices fail?

*If you answered "No" to any of these questions, your organization could be at risk of security and compliance violations.*

Designed as an enterprise-class solution, eGoldFax helps companies of all sizes ensure the highest levels of security, reliability, and regulatory compliance within their faxing environments.
